FOR IMMEDIATE RELEASE

InnoVision Medical Technologies Joins HL7® Caliper FHIR® Accelerator as Associate Founding Member

BALTIMORE, MD – March 6, 2026 — InnoVision Medical Technologies (IMT), a leader in medical device interoperability, today announced it has joined the Health Level Seven® International (HL7®) **Caliper FHIR® Accelerator** as an **Associate Founding Member**.

By joining this elite community, InnoVision will collaborate with top-tier medical device manufacturers, government agencies, and industry organizations to advance global medical device communication standards. The partnership aims to bridge the gap between high-frequency device data and enterprise health IT systems, moving the industry closer to a "**plug and play**" medical data ecosystem.

"Our vision has always been a world where medical devices seamlessly connect to data systems to improve patient outcomes," said Lise Halpern, CEO of [InnoVision Medical Technologies](https://www.innovisionmedical.com). "We believe the founding of the Caliper Accelerator is an important step in that direction."

Eldon Metz, InnoVision Medical Technologies CTO, is the company's representative to the accelerator. He brings decades of expertise in medical data communication and IMT's particular expertise in patient device association management which is critical to reducing manual reconciliation and identification errors, and more assuring reliable information delivered to clinicians at the right point in care.

The Caliper Accelerator leverages **HL7 Fast Healthcare Interoperability Resources (FHIR®)** to create consistent data exchange frameworks. As an Associate Founding Member, InnoVision will contribute its deep expertise in standards-based communication protocols—including IHE and IEEE—to help define the next generation of connected care.

About InnoVision Medical Technologies

InnoVision Medical Technologies (IMT) provides tools to make smart, simple medical device interoperability easy to implement. Our product portfolio of APIs, connector libraries, and cloud-hosted data transfer services enables medical devices to communicate data seamlessly in the digital world. IMT helps healthcare providers, device companies, and IT suppliers unlock the power of real-time device data for better decision support and patient care. www.innovisionmedical.com.

About HL7 and the Caliper FHIR Accelerator

Health Level Seven® International (HL7®) is the global authority on healthcare data interoperability standards. The Caliper FHIR Accelerator is a dedicated implementation community focused on improving the exchange and integration of data from medical and personal health devices across the care continuum. <https://www.hl7.org/caliper/>
